

## Give this guy a hand ...

...or at least a couple of fingers. One cause of occupational injuries is complacency. When you perform the same task over and over, it can become so routine that your mind begins to wander... "Cool movie last night", "What's for dinner?", "Wonder if the 'Skins will win their next game?" Who knows.

That's why we try to drill it in to people that safety requires more than just protective equipment. You have to bring your brain with you, too, and keep it turned on while you're working.

Always be alert to your surroundings, even if you are drilling your hundredth hole, or screwing in your millionth light bulb.
